

## **Bill.com Extends QuickBooks Integration**

Dallas (Sept. 11, 2008)

By WebCPA staff

Bill.com has expanded its integration with QuickBooks and QuickBooks Online Edition by adding synchronization features.

New one-click, two-way synchronization integrates between front and back office functions and eliminates duplicate data entry. The integration helps eliminate the need to manage separate export and import processes and handle

intermediary data sets. Bill.com also supports multiple versions of QuickBooks on a single server to help accountants who manage multiple clients with separate data files.

Other benefits include paperless accounts payable workflow using digital images of invoices and other financial documents for users to access; enhanced bill payment with invoice and check management, and fraud protection; visibility of accounts payable processes, including access to all financial records involved in every transaction; and access to payment status, cleared check images, and transaction audit trail, with embedded links in QuickBooks.
